BRAUERIA (Lunz am See, Austria) 26: 7-18 (1999)

FERNAND SCHMID

Fernand Schmid, recognised authority on the Trichoptera of the World, died in Ottawa, Canada, on November 22, 1998, at the age of 74. Born May 12, 1924, in Sion, Switzerland, he later received his License in Science in 1951, and DSc in 1953, both from the University of Lausanne, where he studied under Professors J. de Beaumont and R. Matthey.

Although, as a student, he evinced interest in aquatic Diptera, and Plecoptera, it is clear that his first love was Trichoptera. His early investigations involved describing new species from Switzerland, Spain, and the Neotropics, and reviewing Navás' Trichoptera collection. His doctoral thesis, published as *Contributions a l'etude des Limnophilidae (Trichoptera)* (1955b), presented a thorough revision and reclassification of the Limnephilidae. However, this was largely a bringing together of his series of revisions on various subdivisions, in which many new species were described.

Shortly after completing his doctoral studies, Schmid made several wide-ranging collecting expeditions to the Indian subcontinent and environs, including Pakistan (1953), Ceylon (1954), Iran (1955), and India itself (1958-1962). In India he collected through the Himalayas of Uttar Pradesh (1958), Sikkim (1959), and the Kameng Frontier Division (1961). He visited the Khasi, Jaintia, and Naga hills of Assam (1960), and the western Ghats in the Winters of 1958-59 and 1961-62. While walking through these areas he was fascinated by the fauna and, equally, by reading a recently published book - H. H. Ross' *Evolution & Classification of the Mountain Caddisflies*. His monograph on the genus *Rhyacophila* was a direct outcome of this combination of circumstances.

On October 16, 1963, he took the position of Trichopterist at the Entomological Research Institute, in Ottawa (later known as the Biological Research Inst. of Agriculture Canada). Here most of his larger systematic works, and many smaller, were completed, including revisions of the Arctopsychidae, Stenopsychidae, Rhyacophilidae, Xiphocentronidae, Setodini (Leptoceridae), Hydrobiosidae, and Pseudostenophilacinae (Limnephilidae). He also worked on the Caddisflies of Canada, producing a series of reviews of the Canadian fauna to the species level, including Rhyacophilidae, Glossosomatidae, Philopotamidae, Psychomyiidae, Goeridae, Brachycentridae, Sericostomatidae, and other smaller families. Schmid's systematic investigations focused on adult morphology, not only in species descriptions, but also in phylogenetic interpretations which were used in the classification of many different groups of Trichoptera. He illustrated his own work with drawings of the highest professional quality.

He stressed the need for authors to adopt a consistent terminology for genitalic characters. In *Some new trends in Trichopterology* (1979) he remarked, „It would also be necessary for trichopterists to refrain from using personal and fancy terms for the genital appendages. They should discipline themselves to adopt the same strictness of vocabulary as they have already accepted for the wing venation." He strongly recommended use of Anker Nielsen's terminology, which he adopted and modified in *Genera des Trichoptères du Canada et des États adjacents* (1980a). This work set a new standard in the study of adult Caddisflies, defining genera and families using a broader set of characteristics. These included the abdominal haemogill system, and the internal glands of abdominal sternite V, the morphology of which was previously poorly known. The *Genera*, out of print for some time, has recently been reissued in English, with revised text (SCHMID, 1998).

On occasion Schmid criticised his colleagues' work, writing in a style perhaps more common in Europe than North America. It was his philosophy that differing opinions in science should be expressed openly. As he freely criticised the work of others, so he was not offended when others disagreed with him. Undoubtedly, his strongly held opinions sparked lively debate, often resulting in more clearly understood issues.

His other interests also included two groups of aquatic Diptera; he described four new species of *Dasymolophilus* (Tipulidae), and 30 new species of Thaumaleidae (making him an authority on the latter). He was quite fond of Butterflies, particularly *Ornithoptera*, of which he described a new subspecies. He also had a passion for Orchids in particular, but also grew other flowering plants at home. In music he favoured the classical composers, especially Mozart, of whose works his favourite was *Die Zauberflöte*.

He rarely attended meetings, but appeared at the fourth and fifth International Symposia on Trichoptera, held at Clemson, South Carolina, USA, and Lyon, France, respectively, where many colleagues met him, and attended his presentations. He often remarked that his attendance at meetings was unnecessary, as his most important contributions were made through his publications. He maintained an active correspondence with colleagues, and was ever helpful with advice, and in lengthy discussions of matters concerning Caddisflies. Visitors were made most welcome. In his publications, he expressed respect and admiration for others, naming 17 species of *Stactobia* (1959b), and 43 of *Psychomyia* (1997) *en bloc* after friends and colleagues.

He was amazingly productive, working on Caddisflies till his strength failed. In 111 papers on Trichoptera, he erected four subfamilies, four tribes, 72 genera, 12 subgenera, and described 1,424 species and 18 subspecies. The Caddisfly diversity which he revealed in the Indian fauna is truly staggering. He currently holds the record for new species of Trichoptera described by one person (J. C. Morse, pers. com.). His contribution to Trichopterology stands out as one of the greatest tributes to the wonders of nature. During the Trichoptera Symposium at Clemson he commented, „It is still fascinating after 30 years. The work is endless. As soon as you finish one problem, there is another problem."

Schmid is survived by his long-time companion, Monique.

We thank Edward C. Becker for providing information and a copy of Schmid's last publication. We also gratefully acknowledge John C. Morse and Stephanie C. Brewer for their assistance, especially in checking the lists of Schmid's publications and new taxa.

John S. Weaver III and Andrew P. Nimmo
